

# Introduction to GRAPHIC DESIGN

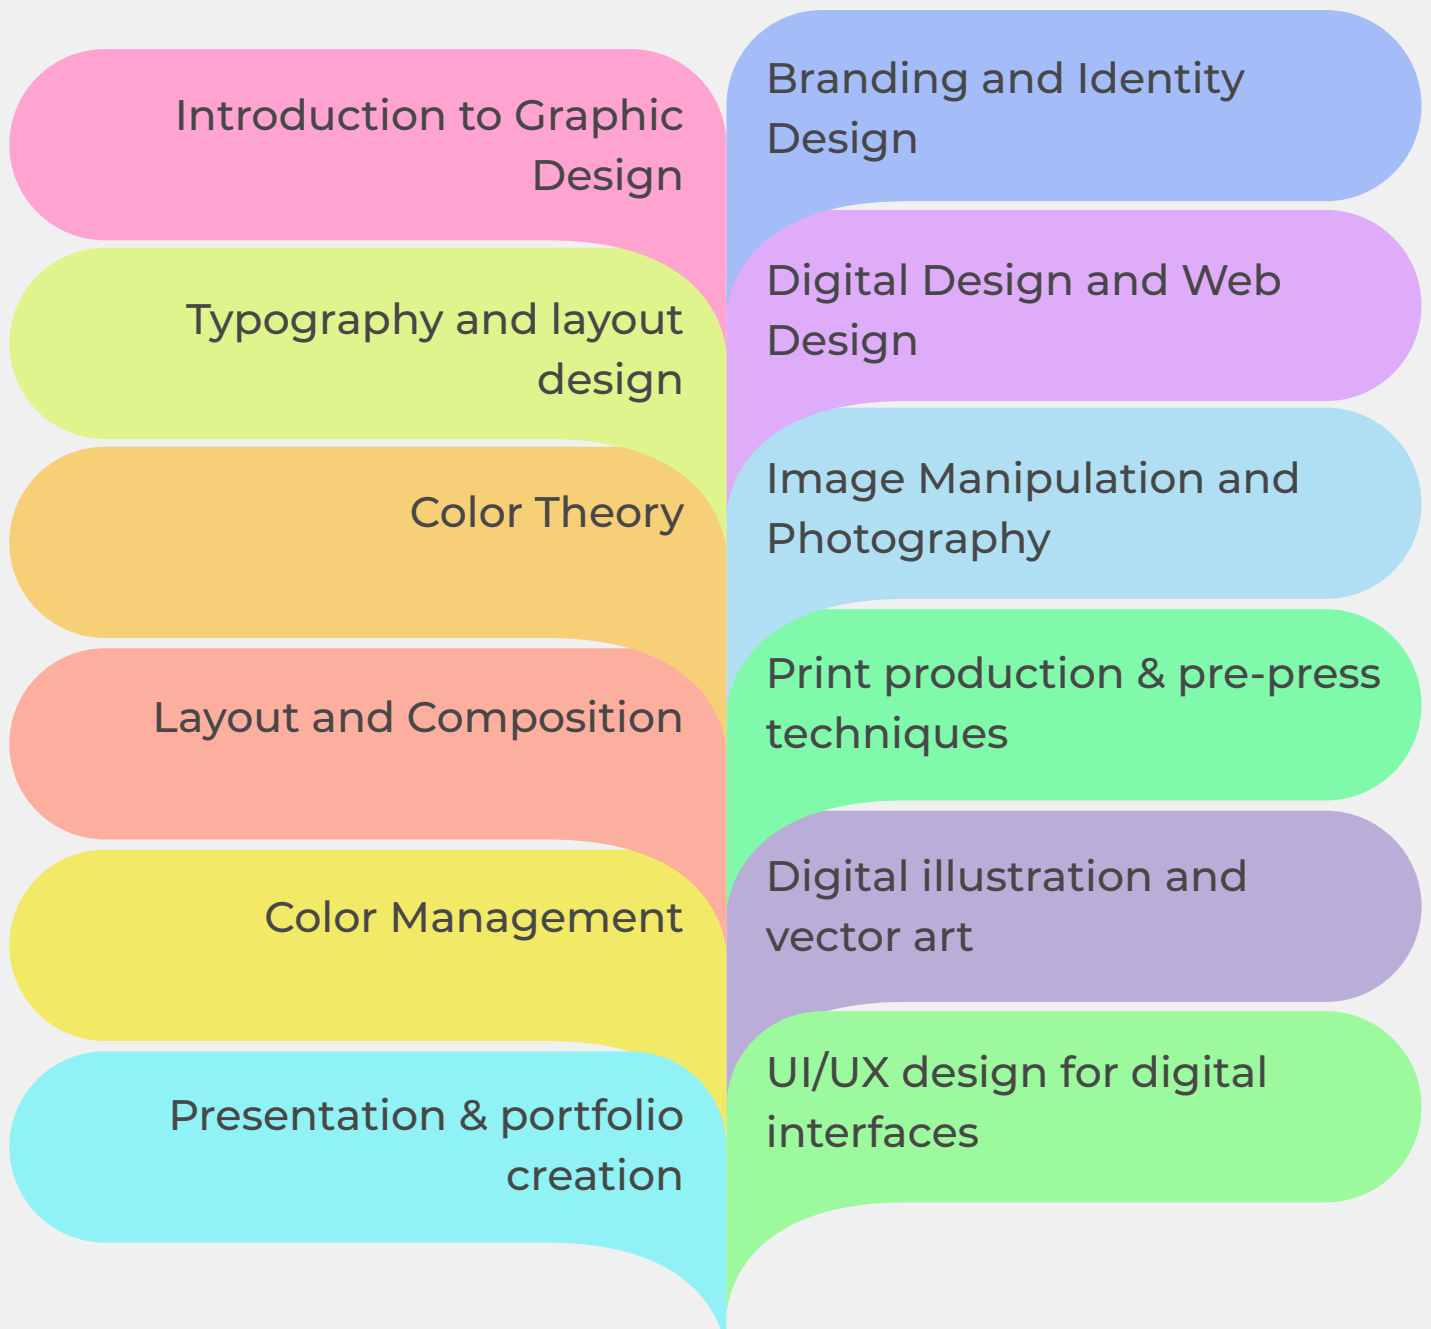

Graphic design is the process of visual communication and problem-solving through the use of typography, imagery, and color. It involves the creation of visual elements such as logos, brochures, websites, and packaging that are used to convey information and ideas to a specific audience. Graphic designers use a combination of technical skills, creativity, and design principles to create effective and engaging visual solutions for a wide range of clients and industries. They work with a variety of mediums including print, digital, and environmental design, and must stay current with new technologies and design trends.

## What Our Students Says About Us:

“

Before Joining Bapu Graphics, I had completed 3 online free graphic design courses with certificates, which all together could not provide me the skill, that online graphic design certificate programs by Bapu Graphics instilled in me. A heartfelt thanks to Saurabh Sir for this Graphic Design Program that really boomed my career in the best way possible.

SONIA JAIN

”

“

A friend of mine told me about Bapu Graphics which is a senior graphics designer with an MNC. My friend's career had always surprised me as I had never believed that he could achieve something that was a reality. On his constant persuasion, I joined the same course and got placed with an ad agency in Mumbai. Bapu Graphics is really a fantastic place!
