

# WEB DESIGN COURSE

LEARN THE SKILLS TO CREATE STUNNING WEBSITES

## ABOUT WEB DESIGN

Web design is the process of creating and designing websites. It involves a variety of skills and disciplines including graphic design, user experience design, and web development. The goal of web design is to create visually appealing and user-friendly websites that are easily navigable and responsive to different devices and screen sizes. A good web design should also be optimized for search engines and accessible to users with disabilities. Web designers use a variety of tools such as Adobe Photoshop, Illustrator, and HTML, CSS, and JavaScript to create and design websites.

## COURSE OBJECTIVE

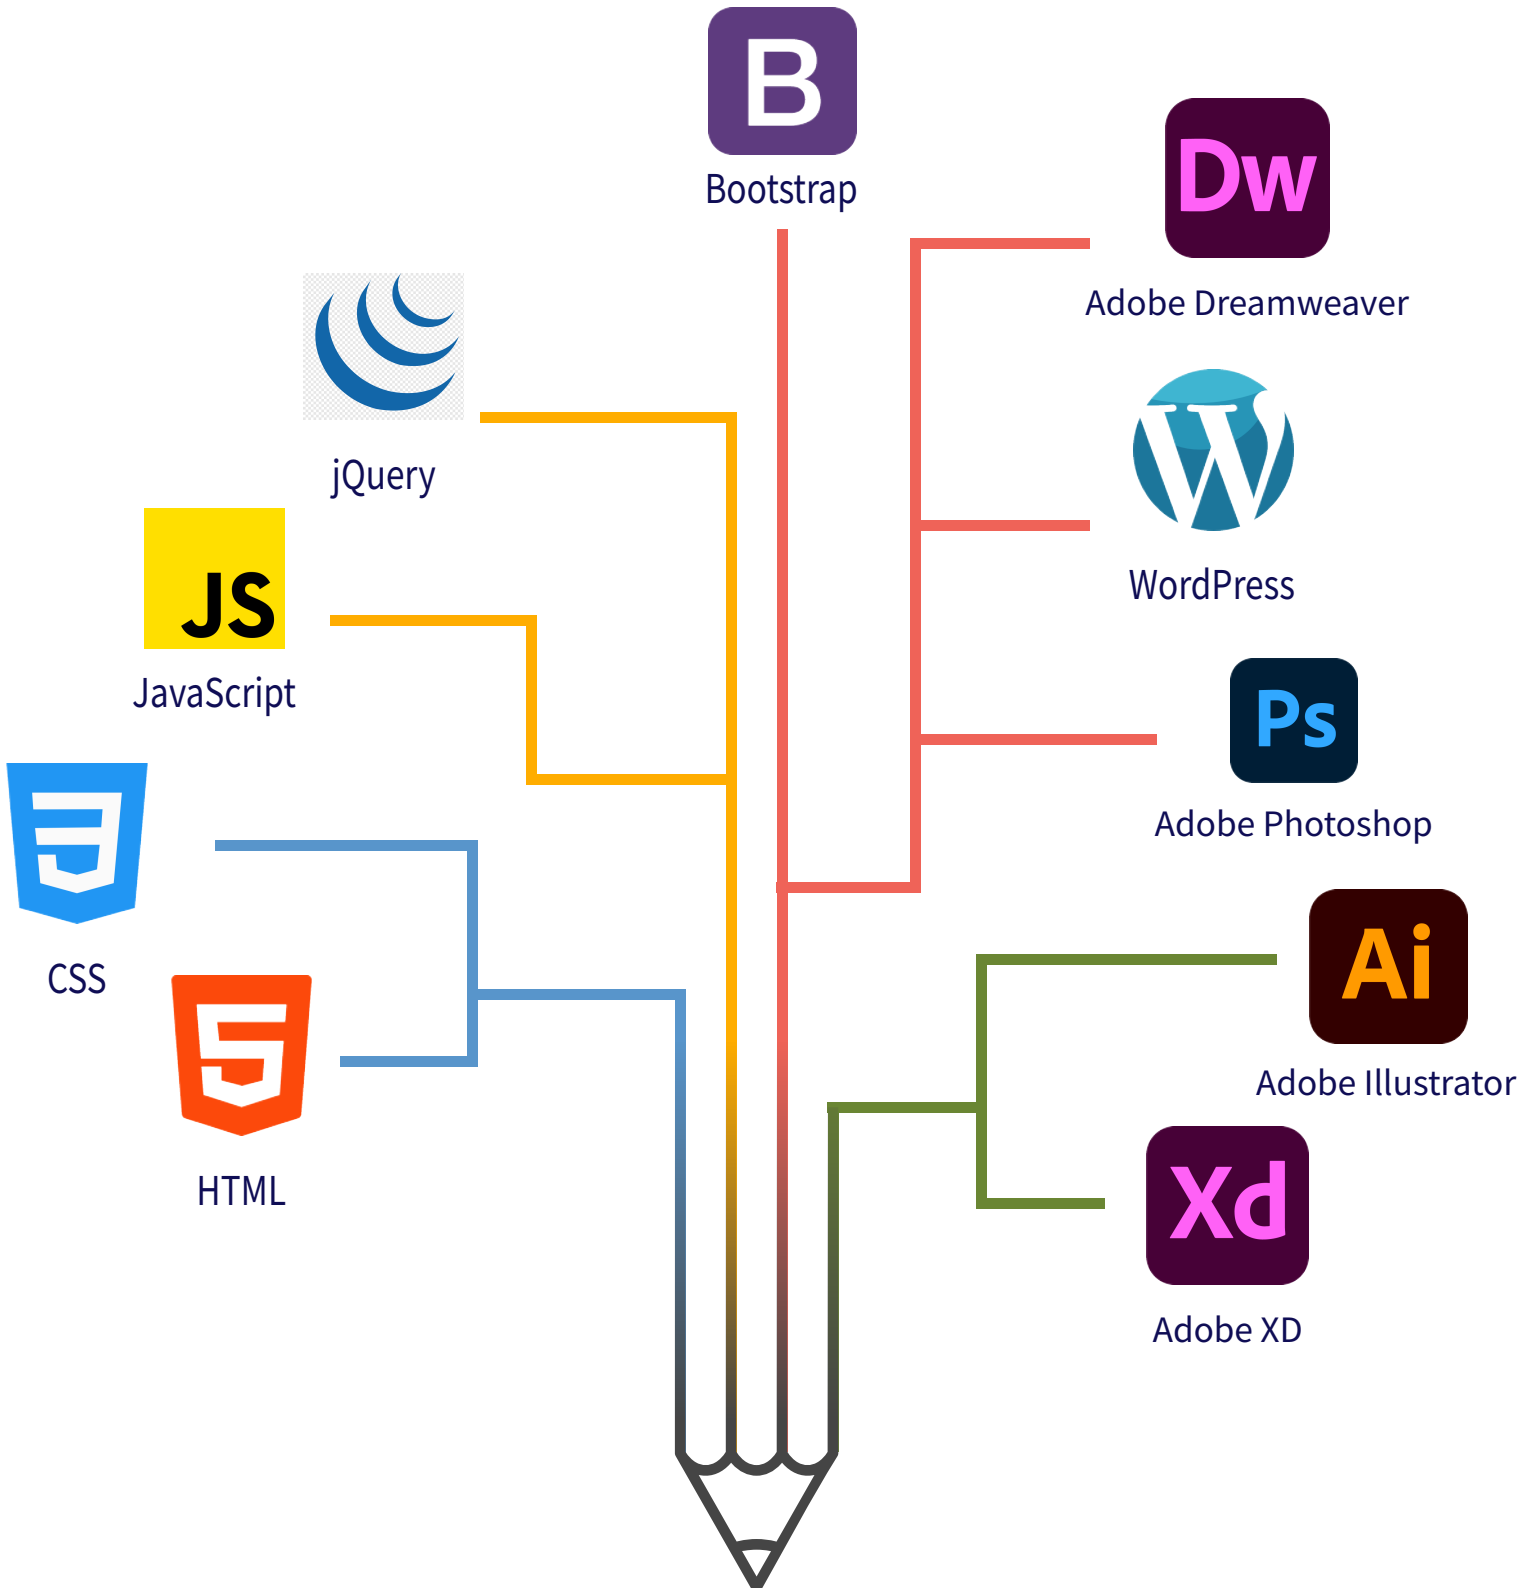

The objective of a web design course is to provide students with the knowledge and skills necessary to design, develop, and maintain effective and visually appealing websites. This includes learning about web design principles, user experience (UX) design, web development tools and technologies, responsive design, and website optimization for search engines. Students will also learn how to create and edit digital graphics, images, and videos, as well as how to use content management systems (CMS) to manage website content. Upon completion of the course, students should be able to create and maintain professional-quality websites that meet the needs of a wide range of users.
